

Video Client

Scalable Solutions

Adjustable interface with multi camera - multi terminal options provide scalable security solutions to satisfy client requirements

Effective and flexible system management

Every action taken by the operator, or change made in the system, is stored in the Log Book for further investigation

The system allows clients to observe events in a secured area remotely with the use of PDA operator terminals through wireless GSM network

Scalable system architecture adjusts to customer specification for number and type of cameras

Number of operator terminals and video cameras are limited by network capabilities and could reach several thousands cameras and tens of client terminals
